

HAIVA 4 • THE PRACTICE

One record, three views.
Every read accounted for.

Records, roles, security, reports and invoices for psychiatrists, psychologists and psychotherapists.

haiva

The day starts with what needs a person first: crisis reviews and safety follow-ups, then appointments, drafts to sign and questionnaires due.

IN PROGRESS IN HAIVA 4

The practitioner's day, from intake to invoice

Safety first crisis reviews and follow-ups come before everything else

○ AI drafts ○ you decide

The AI drafts; you correct and sign.

RECORDS

One record, three views

One truth, so nothing drifts. Each view shows what that person needs, and **no more**.

CONSENT

A separate consent for each purpose

HAIVA 4 · PROTOTYPE

Consent

read at 09:44

On file

Audio recording of sessions
 Given 3 Jul 2026, version 1

On file

Transcription of recordings
 Given 3 Jul 2026, version 1

On file

AI-assisted drafting of reports
 Given 3 Jul 2026, version 1

Not on file

Analysis of the patient's voice
 Voice analysis will not run for this session.

If the patient withdraws recording consent during the session, for example in Sona, recording stops and you are told here.

No voice-analysis consent on file: voice analysis does not run.

Four purposes, four answers

Recording, transcription, AI drafting and voice analysis are asked one by one. Swiss psychologists' professional code asks for prior written consent to record.

Withdrawing is a new state

The history of what was agreed, and when, is kept.

Saying no costs nothing

Care goes on without the recording.

Named exclusions

A patient can exclude a named person. That denial wins over any grant.

ROLES AND ACCESS

Who may see what, by default

ROLE	CHART	PROGRESS NOTES	PROCESS NOTES	RECORDINGS, TRANSCRIPTS	INVOICES	ACCESS LOG
Treating practitioner			own			
Nurse assigned patients						
Practice staff reception, assistants						
Billing codes, no clinical text						
Practice admin team, roles, modules						
Privacy officer reviews access						

full limited none Reception sees appointment times only.

Access follows the treating relationship: a care team, each person with a role and an end date. Planned cover is added the same way. An admin runs the practice but cannot read clinical content. **Defaults, to be reviewed with the clinical lead.**

SECURITY

Every door checked, every read written down

Sign-in

passkey, or password with a second step

IN PROGRESS

:

One gateway

every request passes through it, no side doors

BUILT AND TESTED

:

Access check

care relationships, roles, and explicit denials

BUILT AND TESTED

:

Audit entry

who, which patient, which decision; never content

HARDENING

:

The record

hosted in the country of care, or on your servers

IN PROGRESS

Tested on synthetic data only. Known gaps sit in an open **register**, and an outside penetration test comes before any real patient.

EMERGENCY ACCESS

PROPOSAL

When no one on the care team can be reached

read only, no export

A person asks, with a reason

A clinician of the practice, signed in again. Never automatic, never triggered by AI.

The minimum, nothing more

Safety plan, medication, allergies, problem list, last summary. Never process notes or recordings.

Told at once, reviewed every time

The treating practitioner and the privacy officer are notified; each use is reviewed within two working days.

The patient is told

It appears in their own access history, after review.

Planned cover is not an emergency: it goes through the care team. The legal basis under Swiss professional secrecy (Art. 321 StGB) is to be confirmed by counsel.

NOTES AND REPORTS

Drafted for you, signed by you

BEFORE THE SESSION · NOTHING HERE IS A FINDING

Things to consider

AI-drafted · review required

From the record

PHQ-9 of 29 Sep: item 9 was answered above 0. A safety follow-up is in progress.

PHQ-9 · 29 Sep

Follow-up task

Differs between sources

The intake (3 Jul) records no sleep problems. The sessions on 11 and 25 Sep mention poor sleep.

Discuss today

Sourced

Each sentence of a draft cites the moment of the session it comes from.

Process notes apart

Readable by their author only, never sent to AI without explicit consent.

Signed, then frozen

Nothing is final without the signature; a signed note keeps exactly what was signed.

Reports

Therapiebericht and Fallbeurteilung drafted when they fall due.

INVOICES · SWISS MODULE

From a signed session to a clean claim

HAIVA 4 · PROTOTYPE

sample data

Where this invoice is

Draft

1 Draft

2 Finalized

3 Sent

4 Paid

The draft can be edited. It has no invoice number yet; the number is given when you finalize it, so that the sequence has no gaps.

Invoice date	30 Sep 2026
Draft number	D-0187
Invoice number	Given when you finalize: INV-2026-0042

What you can do now

Go to finalization

Void this draft

A draft has no number, so it is simply discarded in Billing. Nothing is lost from the sequence.

History

30 Sep 2026 09:41

Draft D-0187 created from the pre-billing review by Dr. E. Muster.

haiva counts, drafts and checks; you decide the diagnosis, the positions and the minutes. Each session is invoiced once, and numbers have no gaps. Other countries get their own billing module.

FOR EVERY SETTING

From a solo practice to a hospital.

solo practice

group practice

clinic

hospital

university

EVERY MODULE HAS A REAL SWITCH

enforced on the server

Why modules can be switched

A regulator, an ethics committee or a legal opinion can find that one part of the platform is not allowed for now. That should not mean rebuilding it or losing what it produced. So each module has three states.

Enabled

Runs normally under its safeguards.

Idle

No new analysis runs. Results already produced are kept and can be read. Boards show a banner. Reversible at once.

Removed

Boards open only a card saying the module is removed. Results are not deleted by the switch: they stay in the record under the retention rules and are hidden while the module is removed. Reversible by an admin.

No lock-in: every record exportable in a standard format. Practitioners, practice managers, privacy officers, security testers: tell us what we got wrong.
